SAT42D, SAT29D

Dual Satellite 950-3000 MHz Distribution Amplifier

Optimised for both digital and analogue TV signal amplification.

Thank you for selecting an Australian designed and built amplifier.

The SAT42D and SAT29D are dual satellite distribution amplifiers for use in SMATV multiple dwelling applications. They feature high outputs with adjustable gain and equalisation control. The amplifier is designed to be powered by an 18 volt DC power supply (see Fig . 1).

.....
CAUTION: This amplifier contains devices that are sensitive to Electrostatic Discharge (ESD).
.....

.....
WARNING: Do not connect power directly into the input sockets otherwise damage will occur.
.....

INSTALLATION

The SAT42D or the SAT29D is intended for indoor use.

Mount so there is free circulation of air around the amplifier and sufficient space for the cable connections.

Cable connections

The input/output cable connectors are 'F' Type.

Powering options

LNB powering: A LNB can be powered by the SAT42D or SAT29D from each input socket. Simply select 18 volts, 12 volts or 0 volts using the selector switches.

Local powering: The PSK18S plugs directly into the DC power socket located between the two satellite output sockets (Fig. 1).

Line powering: Can be achieved using a PSK18F and supplying 18 volts to either output terminal (Fig. 2).

Line powering can also be achieved from the input by using a PSK18F to inject voltage into the input lead, then installing a PIK2000 in line with the input socket and connecting the DC plug on the PIK2000 to the DC Socket on the amplifier (Fig. 3).

Adjustments

Gain: Set the output level according to the network calculations.

Adjustment range is 0-20 dB (SAT42D)
0-10 dB (SAT29D)

Equalisation: Set the equalisation according to the network calculations.

Adjustment range 0-15 dB (950-2400 MHz).
